

FICHE TECHNIQUE

RECYCLED TEAK

- Recycled wood duly sorted, cut, then assembled to become a piece of furniture. Every piece is hand-brushed to emphasize grooves and natural grain of teak.
- Finishing : The irregular grey colour is also made by hand. Some softer parts are thus absorbing more stain and become darker.
- Cleaning : Clean the furniture with a damp cloth. To remove a persistent stain (wine, fat), light sanding with a fine sandpaper in the direction of the grain. Natural soap is the most effective product on this unfinished wood. It eliminates the stains and protects the wood when applied regularly. In the case of difficult stains to remove, bleach effectively scour the wood but will tend to lighten it. Rinse thoroughly after applying this product and let dry.
